SUMMARY

Full stack software engineer with 6+ years of experience architecting enterprise-grade applications, scalable APIs, and cloud infrastructure. Experienced building greenfield products end-to-end in Java and Spring Boot with deep AWS expertise, and passionate about integrating AI and generative AI (GenAI) into enterprise workflows to drive workforce productivity at scale. Proven cross-functional collaborator with a track record of influencing technical architecture, delivering high-quality software on time, and operating production systems with reliability and ownership.

EXPERIENCE

Capital One, Senior Software Engineer

Nov 2023 - Present

Architected and delivered a greenfield enterprise platform for automotive dealer direct mail services end-to-end, owning system design, infrastructure, and full stack implementation from initial concept through production deployment. Engineered scalable backend microservices in Spring Boot (Java), designing RESTful APIs and third-party service integrations that power core dealer-facing workflows. Designed and implemented a micro frontend architecture in Solid.js, enabling independent deployment and parallel development of frontend modules across teams. Provisioned and managed cloud infrastructure on AWS, configuring scalable, secure production environments to support high-availability operations. Designed relational database schemas and led data modeling, indexing, and query optimization to ensure high-throughput, reliable data processing across the platform. Established monitoring, alerting, and observability practices, enabling rapid detection and resolution of production incidents. Served as on-call engineer, leading incident response, root cause analysis, and postmortem documentation to continuously improve system reliability. Conducted code reviews and partnered with product managers, designers, and engineers to align technical execution with business objectives.

State Farm, Cloud Software Development Engineer

Oct 2021 - Nov 2023

Architected and delivered enterprise-scale API services in Java and Clojure to process car insurance rates, supporting high-volume internal and external consumers. Integrated AWS and Azure cloud services to improve scalability, reliability, and efficiency of distributed enterprise systems. Designed and maintained GitLab CI/CD pipelines, reducing release cycle time and increasing deployment frequency across environments. Optimized SQL data pipelines for storage and retrieval performance, improving data integrity at enterprise scale. Managed incidents via ServiceNow, reducing system downtime by 15% and maintaining under 1% total downtime. Developed automated test suites and maintained technical documentation to ensure code quality and long-term maintainability. Led Agile sprint ceremonies and cross-functional planning meetings, aligning stakeholders on priorities and delivery milestones.

Lockheed Martin, Software Embedded Engineer

Jan 2020 - Oct 2021

Developed and integrated F-16 avionics software in C++ and Ada using OOP design patterns, optimizing system efficiency and reducing customer costs. Implemented CI/CD pipelines with Jenkins and led Agile Scrum ceremonies across multiple teams to ensure on-time, high-quality delivery.

Yayvaycay, Front End Engineer

May 2019 - Aug 2019

Built and deployed a customer-facing web application from scratch, integrating third-party APIs and Google Firebase, growing the customer base by 10%.

LICENSES & CERTIFICATIONS

Certified Scrum Master

AWS Cloud Developer

SKILLS

Java • Clojure • JavaScript • TypeScript • C++ • SQL • HTML • CSS • Spring Boot • Solid.js

HONORS & AWARDS

Significantly Achieved

annual performance rating for consistently exceeding expectations
